[IMS Internal Auditor](#)

Teaches internal auditors how to perform integrated audits of ISO 9001, 14001 and OHSAS 18001. This course is 3 days duration and includes 2 actual audits that can be used as internal IMS audits.

Informed Risk Management Strategies Providing Information to Top Management

Internal Audits

The purpose of an audit is to collect objective evidence of conformance with the chosen audit criteria. Audit criteria can be ISO 14001, 9001, OHSAS 18001, or a combination of these.

Regulatory Compliance Audits

Periodic regulatory compliance audits performed by an independent auditor can help an organization document regulatory compliance and identify areas of potential noncompliance before they are discovered by a regulatory agency. These audits are performed to USEPA, OSHA, state and local requirements and regulations.

Third Party Registration Assessments

We are qualified to offer registration service through several ANAB Registrars. Reduce auditor travel expenses by choosing us to perform your ISO 14001, 9001 or OSHAS 18001 registration and surveillance audits.
